date 25.03.2021 **rubric** company / market / products

We are proud to present our new product AURASAFE mini!

AURASAFE mini is the market's simplest system for controlling and monitoring fire dampers, and is the ideal solution for small and medium-sized buildings. Bus communication to fire dampers reduces the need for cabling, and free topology makes cabling simple and cost-effective. The possibility of redundancy through ring topology ensures increased safety and reliable operation.

The system can be started quickly and easily without the need for a PC or programming tools. Easy addressing via DIP switch is done on site, and the control unit automatically finds connected modules.

- > Complete control system for fire dampers
- > Monitors up to 100 fire dampers
- > Digital error signal
- > Connection to BMS by Modbus
