## DEAR CUSTOMERS AND PARTNERS

### STATUS UPDATE NEW FACTORY

Our new factory is rapidly developing, and the progress being made is visible every week. The exterior of the building has come a long way, and we are starting to realize the sheer size of our new home. In week 28, the roof will be sealed. We also initiated the casting process of the floor on June 9, which we are splitting into two parts each week until summer break. Casting the production section of the factory requires 12 stages of casting in total, and we estimate a total of 200-250 truckloads of concrete to finalize this part of the building process.

In addition, we have also started the construction of our acoustic laboratory. This will be located in a separate building and is a vital part of the product development and innovation at TROX Auranor. A new future is becoming apparent to us, and we are looking forward to develop and grow in a brand new factory. Until then we are all working at maximum capacity in our trusted old location, managing the planning phase while simultaneously maintaining daily operations.

### PRODUCTION CLOSES IN WEEK 29 AND 30

The summer break is approaching and we are closing our manufacturing facility for a short while in weeks 29 and 30.

This year, we chose to increase our availability, and will therefore only fully close our manufacturing operations for two weeks in the summer. This means that our customers and partners will have increased flexibility on their building sites over the summer in terms of product deliveries. We still recommend that you place your orders as soon as possible, since our capacity is somewhat reduced the week before and after summer break. Click here to order via our webshop: <https://shop.trox.no/>

We wish all our customers and partners a great summer and we thank you for your partnership so far this year..
