

AURASAFE

AURASAFE is the most flexible control system used to monitor fire and smoke dampers in ventilation systems on the market. The system can monitor up to 4000 dampers, distributed across one or more ventilation systems. With the flexibility of AURASAFE you have the option to set the system to be controlled for different scenarios, such as per ventilation system, floor or building, or if all dampers should close simultaneously. This makes AURASAFE suitable for both simple and more complex fire strategies.

- Up to 4,000 dampers in the same system - great flexibility Bus communication between AURASAFE Master and damper modules - easy cabling
- Optional voltage for fire dampers - can mix new and old dampers
- Can choose management strategy according to the customer's wishes - suitable for both simple and advanced buildings
- Control signal to / from unit and fire control panel can be connected to AURASAFE Master, Slave or to field-mounted I / O modules - provides great flexibility and simplified cabling
- Automatic function test with test report - good security for the building owner
