1 Operating controls and indicators

а	Retaining-Clip	Lift clip with Screwdriver for mounting-/removing		
b	Label	For zone	For zone identification	
с	Label 1 9	For damp	er identifica	tion
d	LEDs (red) FAULT dampers 1 9	Off Flashing On	= No aları = Alarm p = Alarm s	resent
е	Pushbutton PRG. (This pushbutton is recessed, use a proper tool to operate).	0	0	umber of dampers of dampers
f	LED (green) NORMAL Position	Flashing On		rs run to NORMAL Position (OPEN) rs have reached NORMAL Position
g	LED (yellow) SAFE Position	Flashing On	•	rs run to SAFE Position (CLOSE) rs have reached SAFE Position
h	Pushbutton TEST	– System – Functior		(Dampers/Actuators/Control Unit) (for checking the system manually)
i	Electrical connection	9-Pin Terr	ninal Conne	ectors

2 Preparations for faultless commissioning and operating

BKS24-9A

SBS-Control

3 Programming the number of dampers per BKS24-9A

Targets

.8

The BKS24-9A unit is factory programmed for 9 dampers

· Factory programmig:

• The programming must be modified accordingly when connecting 1 to 8 dampers

3.1	 3.5	Procedure
U . I	 0.0	rioccuurc

3.1 <u>Å</u>	Note preparatory work in Para. 2	
3.2	Relation The International	Press and hold PRG. key (until 3.5 included)
3.3	BKS24-9A Zone 1a Made to Excent of the control of the	 The fault LEDs for the number of dampers programmed light up for 4 seconds (e.g. 1 to 9)
3.4	BKS24+9A Zone 1a Vark to Excendence 1 BSK 34 BSK 37 7 2 BSK 35 5 BSK 38 6 3 BSK 36 6 9 6	 The fault LEDs for the number of dampers programmed and acknowledged by the BKS24-9A unit start flashing (e.g. 1 to 5) The number of dampers acknowleged must correspond to the number of dampers labelled
3.5 ally		 Press the TEST key at the same time as the PRG. key The numer of dampers acknowledged is now programmed in the BKS24-9A unit

Note A System test is initiated automatically (see Para. 5)

4 Adding / removing of dampers		
Example	 A fire damper is to be added to an existing system, resp. or is beeing removed. The dampers 1 to 5 are in operation and damper 6 is the new one, or but, damper 5 is being removed. The comment in <i>(bold italics)</i> refers to the removal of a damper. Note preparatory work in Para. 2 An automatic system test is performed when the power supply (AC 24 V) is energised (see Para. 5) Start flashing: The status LED for OPEN and the fault LED of the new damper 6, or <i>The status LED for OPEN and the fault LED of the removed damper 5</i> 	
4.1 4.5 Procedure 4.1		
4.2	 Label adapting on the front of the BKS24-9A unit Dampers 1 4 or Dampers 1 6 Press and hold the PRG. key 	
4.3	 The fault LED for the five dampers programmed (see example) light up for 4 Seconds BSK 36 BSK 38 <	
4.4	 The fault LEDs for the number of dampers programmed and acknowledged by the BKS24-9A unit start flashing after adding a damper actuator the fault LED 1 to 6 start flashing after removing a damper actuator the fault LED 1 to 4 start flashing The number of dampers acknowledged must correspond 	
4.5 Note . System test is initiated automatically see Para. 5)	 to the number of dampers labelled Press the TEST key at the same time as the PRG. key The number of dampers acknowledged is now programmed in the BKS24-9A unit 	

5 System testing			
	 control unit Note preparatory work in P 	 The system test deals with the connected dampers, the actuators, the installation and the control unit Note preparatory work in Para. 2 The dampers are moved to the OPEN and CLOSED position during the test 	
5.1 Initiation crit	eria a) Automatic	 After programming of connecting After powering up (AC 24 V) 	
	b) After a fault alarm	 By pressing the TEST key 	
5.2 5.7 Proced			
	5.2 BK524-9A	All 11 LEDs light up for 4 Seconds (lamptest)	
	5.3	The OPEN/CLOSED status LEDs flash alternately for the duration of the system test	
	5.4	The dampers are moved in the CLOSED direction and must attain the safe postion	
	5.5	 The dampers are moved in the OPEN direction and must attain the operating position (as described in Para. 2.6) 	
		 The status LED for OPEN starts flashing when the damper departs from the safe position The status LED for OPEN gives a steady light when the damper reaches the operating position 	
	5.7	The system is now ready to use	

6 Function testing			
	${\bf v}$	 The purpose of the function test is for checking the system manually Note preparatory work in Para. 2 The connected fire dampers are moved to the CLOSED and OPEN positions 	
	6.1 Initiation criteria		Press and hold the TEST key
	6.2 6.6 Procedure		
	6.2		 The status LED for OPEN lights up All fire dampers are in the operating position (OPEN) The fault LEDs 1 to 9 are off
	6.3		 Press and hold the TEST key The staus LED for CLOSED will start flashing
	6.4		 When the status LED for CLOSED gives a steady light it means that the dampers have reached the safe position Release the TEST key
	6.5		 The dampers move to the operating position When the status LED for OPEN gives a steady light it means that the function test has been completed successfully
	6.6	o.k.	The system is ready for use

7 Fault alarms			
7.1 Existing fault Note Possible causes see Para. 7.3	BK524-9A BK524-9A 100101000 100101000 100100000000000	 Fault in the system Fault LED flashing (e.g. damper 4) Status LED for OPEN or CLOSED flashing (depending on control signal) Existing fault Contact K1 open 	
7.2 Stored fault		 Temporary fault in the system Fault LED bright (e.g. damper 4) Stored fault Contact K1 closed A stored fault can be acknowledged in two ways: Manually with the TEST key (see Para. 4) Automatically when the dampers have run properly to two successive end positions OPEN / CLOSED 	
7.3 Initiation criteria	 When a fire damper does not reach the operating position or safe position within the specified running time Para. 2.1 		
	 Open-circuit or wrong polarity on 2-wire conductor Para. 2.4 to 2.7 Open-circuit or fault in the Tripping Device BAE72-S Para. 2.4 No power supply or fault in the BKN230-24 unit Para. 2.3 Open-circuit or fault at the plug connections from damper actuator to the BKN230-24 unit Para. 2.2 		
	 After adding a damper actuator Para. 4 	to or removing one from an existing system	
7.4 Unit fault	Fault in the BKS24-9A unit		
\triangle	 All 11 LEDs on the BKS24-9A unit flash in unison It means that the BKS24-9A unit is defective and must be replaced 		

Technical data

Control and monitoring of up to 9 motorized fire dampers in combination with the Communication and Power Supply Units BKN230-24

- Signals the operating positions and any faults from the fire dampers to which it is connected.
- Reduced wiring costs due to 2-wire communication
- Propagation of group alarm and damper position to an overhead system via auxiliary contacts
- Panel mounting (DIN rail)

Technical data

Electrical data	Nominal voltage	AC 24 V, 50/60 Hz
	Power supply range	AC 21,6 28,8 V
	Power consumption In operation	3.5 W
	For wire sizing	5.5 VA (I max. 6.4 A at 2.5 ms)
	Connection	Terminals for 2 x 1.5 mm ²
Lenghts of conductors 2-wire-conductors a/b control input 13		max. 600 m (wire 0.75 mm ²) max. 600 m (wire 0.75 mm ²)
	Auxiliary contacts	AC 24 V at 0.5 A
Safety	Protection class	III safety extra-low voltage / UL Class 2 Supply
	Degree of protection	IP20
	EMC	CE according to 2004/108/EG
	Mode of operation	Type 1 (EN 60730-1)
	Rated impulse voltage	0.5 kV (EN 60730-1)
	Control pollution degree	2 (EN 60730-1)
	Ambient temperature range	0 +50°C
	Non-operating temperature	−30 +50 ° C
Maintenance		Maintenance-free
Dimensions / Weight	Dimensions	See «Dimensions» on page 2
	Weight	Approx. 160 g

Safety notes

• The device is not allowed to be used outside the specified field of application, especially in aircraft or in any other airborne means of transport.

It may only be installed by suitably trained personnel.

Any legal regulations or regulations issued by authorities must be observed during assembly.

- The device may only be opened at the manufacturer's site. It does not contain any parts that can be replaced or repaired by the user.
- The device contains electrical and electronic components and is not allowed to be disposed of as household refuse. All locally valid regulations and requirements must be observed.

Product features

Mode of operation 三 エ	The BKS24-9A unit receives position signals from the BKN230-24 units and transmits control commands to them over the 2-wire conductors. Correct operation of the dampers is indicated by the 2 LEDs: Control ON = NORMAL Position Control OFF = SAFE Position
Fault	If the damper does not reach the required position within the preset time, the appropriate on- board FAULT LED flashes and, at the same time, the FAULT contact K1 is activated. This contact is overridden as soon the defective damper reaches the required position. The on- board FAULT LED remains on, until the fault is reset.
Auxiliary contact K2	An auxiliary contact is provided for signaling the positions of dampers to a higher-level system. The function of the auxiliary contact can be programmed via terminal 14 according to the instructions beside.

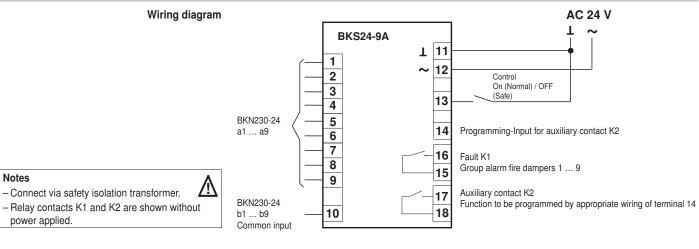

BKS24-9A

SBS-Control

Product features	(Continued)
Installation and connections	The BKS24-9A unit can be clipped directly onto a 35 mm DIN mounting rail and external wiring is connected by two 9-pin terminal connectors.
Functional testing	Functional testing can be performed by pressing the TEST pushbutton. While this button is held depressed, the dampers run to the SAFE position. Any malfunctions are indicated by the internal FAULT LEDs.
Fire zoning	The required fire zones must be taken into account when making the groupings and when wiring the BKS24-9A unit.

Electrical installation

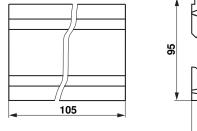

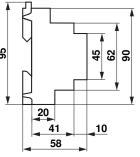

Function Contact K1	
Situation	Status
Alarm	15 16
No alarm	15 <u>1</u> 16

Programming Auxiliary Contact K2		
Function	Wiring	Status
Contact K2 closed, when all Dampers OPEN	14 ── 11 ⊥	
Contact K2 closed, when Damper No. 1 OPEN	14 12 ~	1718
Contact K2 closed, when all Dampers CLOSED	14 left open
